

M-JET™

**M-JET +**

M-JET + system boasts a robust casing, ensuring durability and protection from dust and water. It features a dashboard with LED indicators for easy monitoring. Additionally, it includes sensors for belt speed, chain elongation, belt alignment, follower shaft position, choke and level, as well as bearing temperature. With a convenient work stand by the conveyor and running status indicators, our system ensures efficient and reliable operation.

**M-JET**

M-JET system features a strong, dustproof, and waterproof casing, ensuring durability and protection in any environment. With remote management capabilities, you can easily monitor and control the system from a distance. It includes sensors for belt speed, choke and level, follower shaft position, bearing temperature, chain elongation, analogic, and belt alignment, providing comprehensive monitoring for optimal performance and reliability.

**M-JET LINK**

The BURST SENSOR serves as a highly effective indicator of the status of your safety devices, providing real-time alerts to enhance the safety of your facilities.

It facilitates the connection of sensors to the Master M-JET+ or M-JET systems for individual conveyors via extension wires (multicables).

Additionally, a connection box is available for conveyor lengths ranging from 20 meters to 80 meters, ensuring seamless integration and extended coverage.
